W.D. Gann's Mass Pressure Forecasting Technique

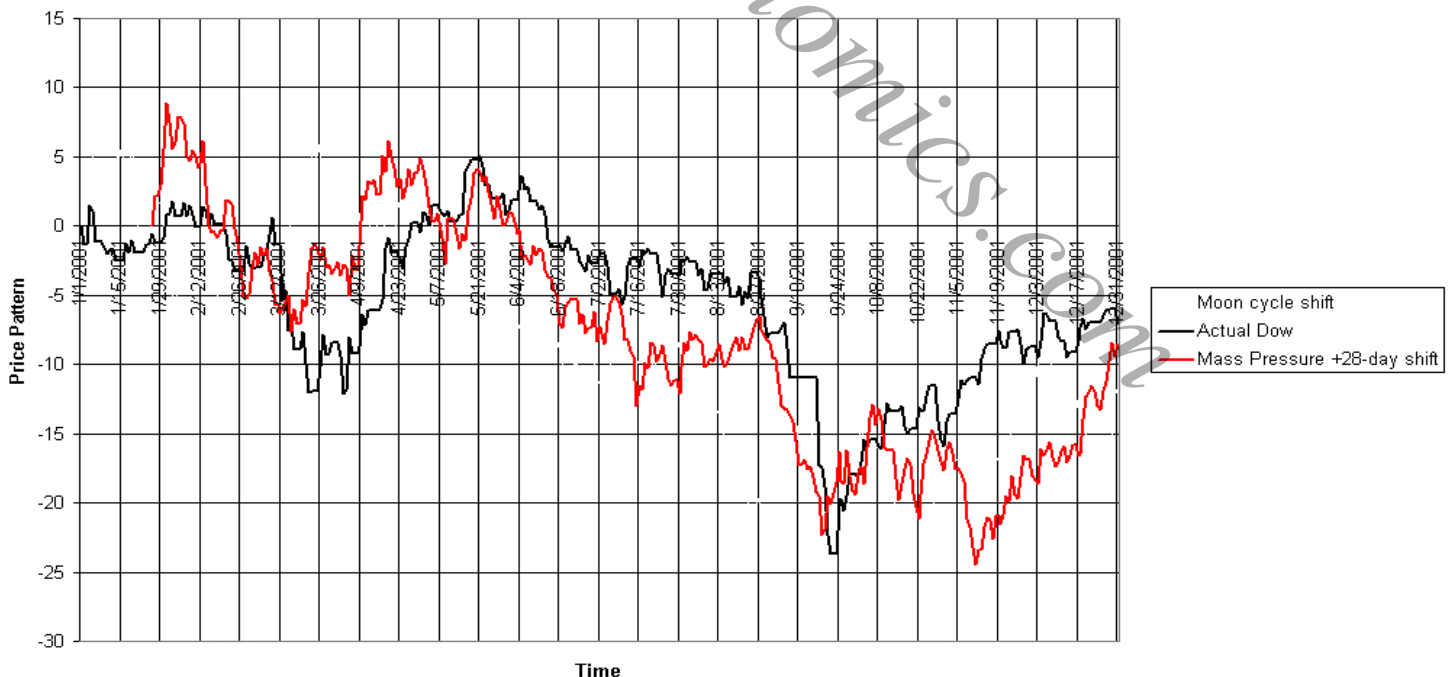

Of all the Gann forecasting techniques known, the Mass Pressure Formula has been one of the most closely guarded secrets. In fact, there are very few "Gann Experts" that even know how to create a Mass Pressure Chart or anything about the nature of its construction. Many people have wondered if there were any "signs" that 2001 was going to be such a bad year. To that I say "YES" there were clear indications of what 2001 would be like in the stock market. My interpretation of Gann's Mass Pressure Formula certainly did an outstanding job of predicting the basic trend changes of the market as the chart provided with this article clearly shows.

Although I will not discuss the Mass Pressure Formula in this article, I will say that it is based entirely on Gann's philosophy that **"the future is nothing but a repetition of the past"**. For example, one of the best-known Gann cycles is the cycle of 60-years. What happened in the year 1941? The Japanese bombed Pearl Harbor and the pilots crashed their planes into their targets. The Pentagon's ground breaking ceremony was held on 9/11/41. 60-years later in the year 2001, the movie Pearl Harbor was released, suicide pilots once again attacked the USA and the Pentagon experienced another "ground breaking".

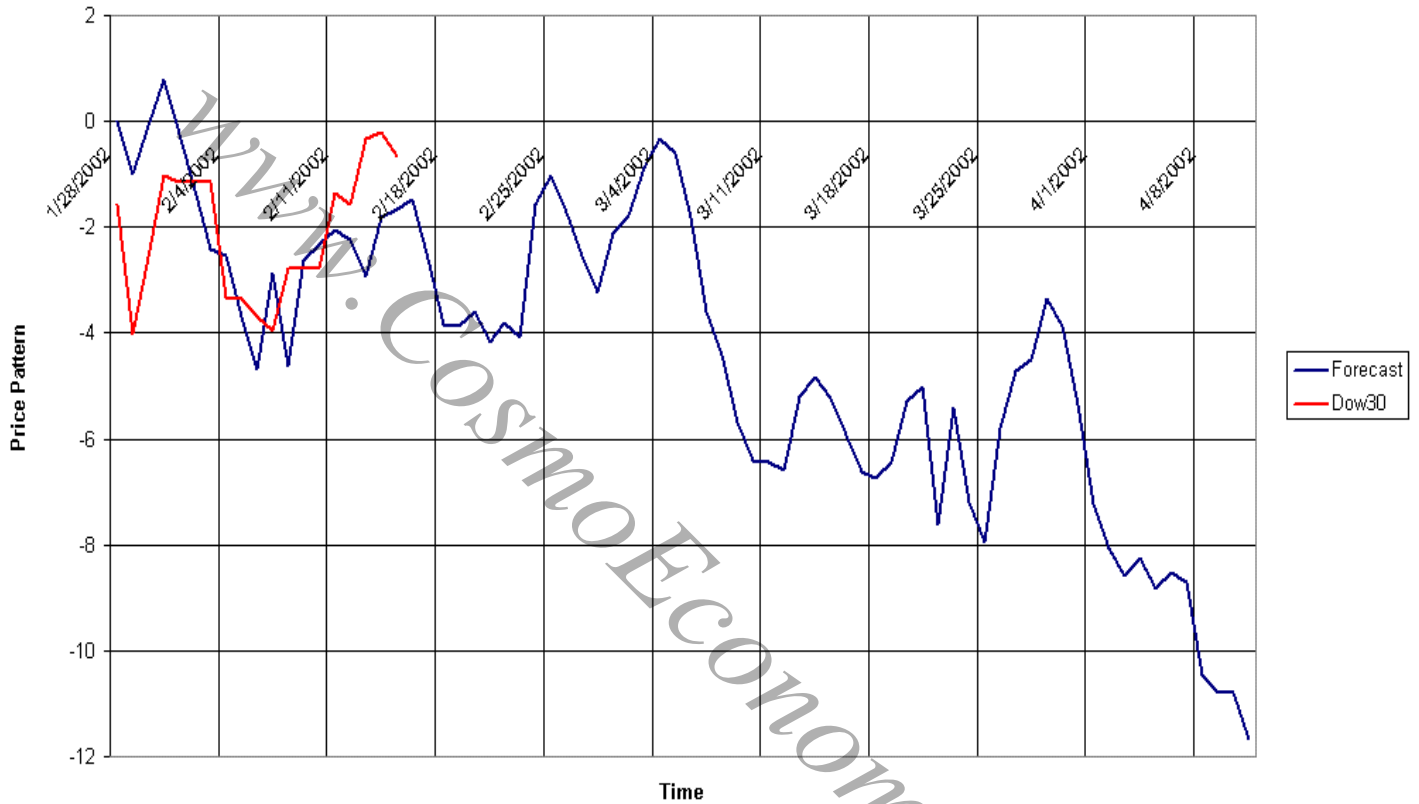

What does the Mass Pressure say about 2002? I'm including a portion of my Mass Pressure forecast, which shows that the Market is pretty much bearish until 4/11/02. If you would like to learn how to make these charts, the complete technique along with my Excel worksheet which calculates and produces the charts below is provided in my Gann course **"Mysteries Of Gann Analysis Unveiled"**, which can be purchased through the Sacred Science Institute, (800) 756-6141 or www.SacredScience.com

Just remember that even though the Mass Pressure formula provides valuable information about the possible future, it will not necessarily make you a better trader. You have to trade the market based on what it is actually doing. That said, enjoy the small sample of the 2002 Mass Pressure chart.

Price Forecast

Gann's Mass Pressure Chart (I never published this!)

Each year, W.D. Gann would draw up a stick figure forecast of the stock market averages and various commodity futures in his Supply & Demand newsletter service. He would provide commentary that would provide an outline of what he expected the market to do. Gann said that the future was just a repetition of the past and one needed only the right beginning to predict the future. In latter years, Gann provided something he called the Mass Pressure Chart. In his advertisement for his Master Mathematical Time Price

The market first topped on March 12th as indicated in the composite chart. The bearish forecast into early May only lasted until mid April before stocks regained a bullish up-trend. This tells us that the market is stronger or more bullish than the composite. The High for the year came on August 6th before bearish cycles started to weigh on the market, which lines up with the forecast. There was also a second high on October 10th and a panic type break on October 22nd. The market had the strong bounce back as forecast but never tested the panic lows again. Volatility lasted until November 22nd around Thanksgiving when the up-trend accelerated. The market did sell off again providing the buying opportunity indicated for the winter solstice on December 21st, 22nd. Overall, the forecast predicted the general mood of the market with uncanny accuracy. Even though the forecast chart does not match the actual chart swing for swing the main

W.D. Gann's Secrets to Forecasting

Today there are so many “Gann Experts” that are cashing in on the mysterious methods of W.D. Gann. There are tons of books, several courses, computer programs, trading systems or methods, etc. that lure in the trading public, especially commodities traders to spend their hard earned money in the hopes of discovering the true “Holy Grail” techniques of Mr. Gann. I have personally spent countless sums of money over the 15 years or more of personal study, in the pursuit of Gann’s methods. I really have no idea what the total final bill amounts to but I can easily recall how much of it was a value and how much of it was complete junk. I won’t slam anyone or point the finger at authors of material that is of little value. What I am willing to do is share my interpretation of Gann’s work with the public in the form of a book. I never planned on writing a book. But after all of the letters I received from the two previous articles that I wrote for Traders World requesting that I offer more information, I decided to put some
